Randomized Kaczmarz for Tensors

Dr. Ana Ma

University of California, Irvine

Abstract: When data is large-scale, techniques such as the Randomized Kaczmarz algorithm and Randomized Gauss-Seidel algorithm are advantageous for Solving linear systems of the form $Ax = y$. In this talk, we discuss an extension of the Randomized Kaczmarz algorithm to the setting where large-scale data takes on the form of a multidimensional array. Traditionally, multi-dimensional data, i.e., data in the form of high dimensional tensors, are often unfolded to be treated as a matrix-vector problem. In this work, we seek to preserve the tensor structure of the input data and provide theoretical guarantees for recovering underlying, unknown tensors from linear measurements using a tenderized version of the Randomized Kaczmarz algorithm.

When: Monday, May 4, 2019, 6:00 – 7:00 pm
