

Tactile Activities in Mathematics webinar

You are invited to attend the Tactile Activities in Mathematics webinar! This webinar will be held on **Tuesday, April 27th from 1:00-2:00pm ET**. Hands-on activities in mathematics can enrich students' learning experiences and help them to develop their understanding of mathematical ideas. We're excited to have three fantastic guest panelists, each experienced in implementing tactile activities in math classrooms. In this webinar, our three guest panelists will each share an activity they have implemented, and then there will be a panel discussion where attendees can ask questions and gain ideas about the benefits and implementation of tactile activities.

Our esteemed guest panelists are:

Hortensia Soto (Colorado State University)

Jessica Libertini (Geneva Centre for Security Policy and the University of Geneva)

Ricardo Nemirovsky (Manchester Metropolitan University)

- The panelists have requested that attendees have some materials on hand so that everyone can engage in the activities. The requested materials are: paper, pencil, string/rope, a large triangle on the floor made with painter's tape (or, in a pinch, a large triangle drawn on a piece of paper)

We hope you'll join us for this exciting webinar, if you are able! If you wish to attend, please register using the link below.
